

Plustek OpticFilm 7200i

Higher resolution, offering more possibilities,
now with hardware solution for defect elimination...

The **Plustek OpticFilm 7200i** is a 7200 dpi film scanner capable of scanning 35 mm slide and negatives. High optical resolution, USB 2.0 connection and fast scan speed allow **Plustek OpticFilm 7200i** to easily outperform other professional film scanners.

The package comes with SilverFast 6 Ai iSRD. The SilverFast Ai is an award-winning scan software, provides the user a superior scanning environment with production-oriented options. The newly introduced iSRD (Infrared Smart Removal of Defect) feature provides productive defect removing solutions, eliminates dust and scratch automatically.

The **Plustek OpticFilm 7200i** is the perfect scanner for photographers and small office/workshop users, offering a variety of possibilities including high quality images for magazines and other printed material, photo enlargements, brochures, digitizing slides/ negatives, web pages, as well as images to share with friends on the Internet, and more!

iSRD - Hardware Solution for Automatic Dust & Scratch Elimination

SilverFast iSRD, hardware solution to eliminate dust and scratch using infrared channels, brings a new dimension in defect removal technologies. Two modes, automatic and manual, are available. In automatic mode, SilverFast iSRD operates completely on its own, applies corrected result to the entire scan frame. In manual mode, the user can select certain area(s) to work on, and leave the rest untouched. With defects removed, SilverFast iSRD does not soften or blur the scanned file, provides the user with an enhanced genuine image.

Higher Resolution, More options

Scanning at 7200 dpi, you have the potential to turn a 135 slide (3.5 x 2.3 cm) into a printing quality A1 poster (84 x 55.2 cm). OpticFilm 7200i is an excellent solution for magazines and other printed material.

Compared to digital cameras, this film scanner has more than a 68-Mega-pixel capability, easily overwhelming popular digital cameras. For home and leisure usage, you can scan your images and share them on the web with fellow photographers. You can create e-cards, or simply send your images via email to friends and family.
